# Velteko Versatile Series

- Each vertical packaging machine in the VERSATILE range can form, fill and seal more than 100 different bag types! The most versatile VFFS packaging machines on the world market!
- All VERSATILE machines are tailored to meet your individual requirements, while providing industry-leading versatility that allows them to adapt to changing market needs.
- When you invest in a VERSATILE vertical packaging machine, you are provided with peace of mind in knowing the machine you buy today will provide the bags you need tomorrow.
- The VERSATILE series consists of 3 vertical packaging machines with different maximum cross seal widths.
- - **VERSATILE-280** (HSV280) with a maximum cross seam width of 280mm
- - **VERSATILE-360** (HSV360) with a maximum cross seam width of 360mm
- - **VERSATILE-440** (HSV440) with a maximum cross seam width of 440mm

## 1 machine for more than 100 different bag variations

Dimensions stated above are in mm.

Variation of Standup pouches

16 variations of standup pouches continuously created by 1 vertical packaging machine

Standup pouch with euroslot

Standup pouch with carry handle

Standup pouch with reclosable flap

Standup pouch with zipper

Standup pouch with zipper and euroslot

Standup pouch with zipper and carry handle

# Data Service

## VELTEKO Dataservice

Various data generated during machine operation is recorded and saved. VELTEKO dataservice enables this data to be used e.g. for production control and management and/or for machine diagnostics.

### 3 packs

#### Dataservice Support

*For remote communication between the machine and the user and/or between the machine and the VELTEKO Service Department. It comes as standard equipment on VELTEKO machines.*

- USB and LAN ports
- VPN router for a secure connection
- IP Service Camera + Headset for online transmission of video and audio

#### Dataservice Visual

*Full monitoring of machine use and its technical status from any place in the world that has access to the internet. Dataservice Visual comes as standard equipment on VELTEKO machines.*

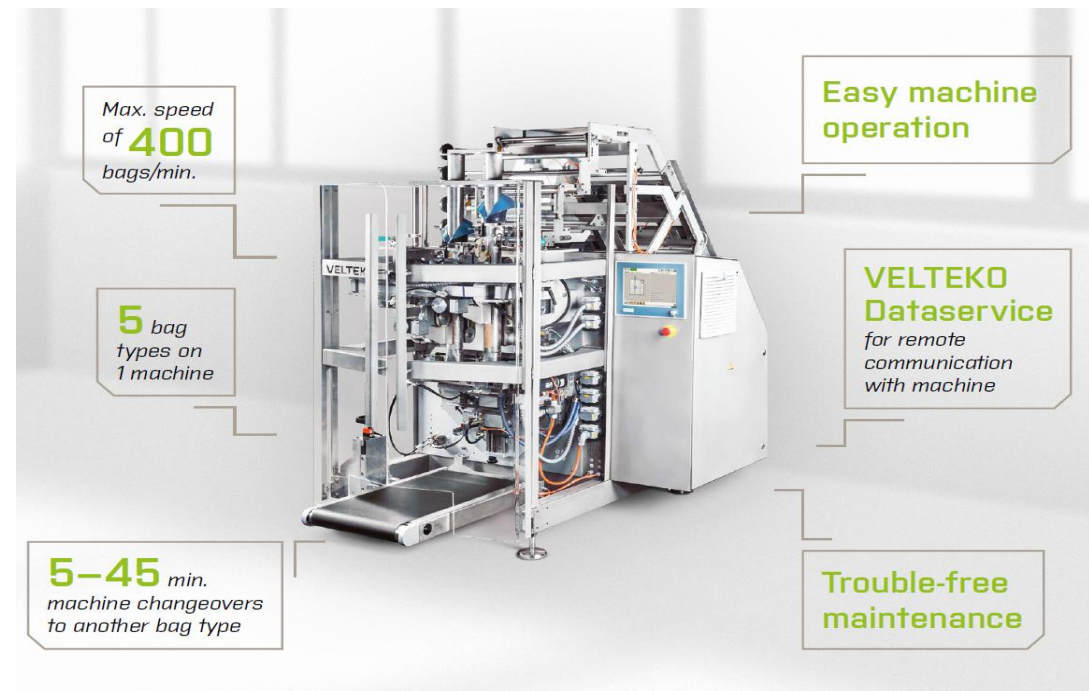

#### Dataservice OPC

*A versatile software tool that makes all machine data available for any evaluation system.*

# Duplex Series

- Robust machine construction, precise production in the Czech Republic, and the use of quality materials and branded components guarantee not only **high machine reliability**, but also a **long service life**.
- High-speed performance of the DUPLEX-360 (HSV360B-Duplex) is achieved through the use of dual product feed tubes that effectively **DOUBLE the packaging speed** of your products. And due to its efficient dual tube operation, and therefore a need for only one conveyor, you will see close to a **50% reduction in costs for transporting your products to the doser!**
- **5 Different Bag Types on 1 Machine**

## 5 bag types on 1 machine

The dimensions are in millimeters.

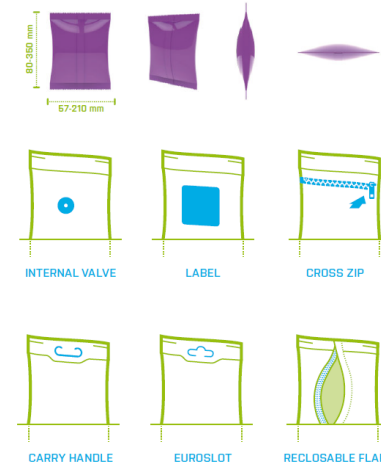

## Modifications for expanding bag functions

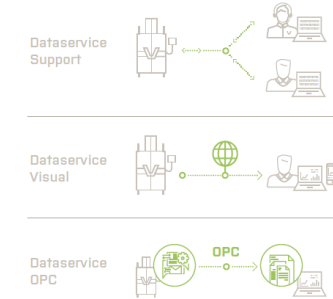

# Slim Series

- SLIM-210 series of vertical packaging machines is specially designed for packaging **snacks** and **small-pieced products** into **pillow bags**. It delivers the highest possibility of **optimizing all necessary conditions for creating high-quality seals at high speed**.
- The SLIM-210-TWIN (HSV210A-SLIM-TWIN) has a maximum speed of 400 bags/min in a **small footprint**.

## Pillow bag

## VELTEKO Dataservice

## Easy to maintain

- Dataservice support.
- Monitoring of service intervals, depending on the type of machine operation.
- Extensive self-diagnostics and monitoring.
- Ability to set access rights to individual controls.
- Sensors with connectors for easy replacement.
- Interactive manual and spare parts catalogue for each specific machine configuration.
- Automatic check for pneumatic leaks.
- Support from VELTEKO's Service Center.

Tight and good-looking seals

Maximum speed of **400** bags/min with the twin version

**750 mm** machine width

# Prime-360

- *The PRIME-360 contains advanced VELTEKO technology that allows it to deliver an extremely attractive price/performance ratio for packaging your products into basic bag types.*
- *Its robust construction using high quality materials and branded components, combined with precise manufacturing in the Czech Republic, ensure extremely high reliability and a long, productive service life. The PRIME-360 series was built to be your long-term doypack partner.*
- **PRIME-360** packaging machines are designed for packing into basic types of **PILLOW** bags, gusseted bags, flat bottom bags, corner creased bags and their various modifications.
- 5 - 30 minute changeover time between bags

## Optimal price/performance ratio for basic bags

### MACHINE FEATURES

- Automatic film centering
- Friction/Vacuum pulling belts
- Registration mark sensor
- Mechanic/Pneumatic splicing table
- Robust construction
- Self-diagnostics and troubleshooting

### HUMAN-MACHINE INTERFACE

- 10" full color touch screen
- Industrial PC
- Intuitive machine setup and on-screen guide
- User presets for machine setup

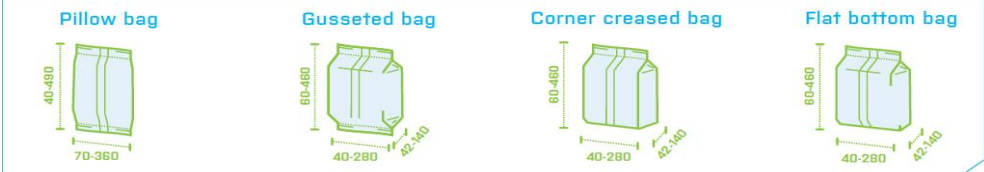

### DATASERVICE

- Online service support
- Online data management
- OPC dataservice available

## 4 TYPES OF BASIC BAGS

## MODIFICATIONS

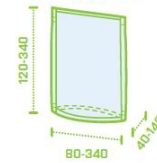

# Doypack/ Standup Pouch

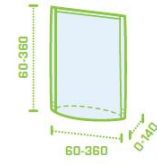

- *If you strictly require DOYPACK bags for the packaging of your high quality products, then DOYPACK-360 is your clear choice! VÉLTEKO engineers purpose-designed the DOYPACK-360 to achieve the best price/performance ratio for the forming, filling and sealing of DOYPACK bags. Built from the ground up, all aspects of the DOYPACK-360 are focused on providing you with the best looking, highest quality and most smoothly sealed DOYPACK bags on the market!*
- *The DOYPACK-360 features robust construction, the highest quality materials, brand name components and precise manufacturing in the Czech Republic to ensure extremely high reliability and an extra long service life.*
- *The vertical packaging machine DOYPACK-360 is specially designed for packing especially into **doypack bags**, including the creation of **doypacks with a zipper** and many other variants of doypacks.*
- **- 5 - 45 min.** changeovers to doypack bags  
**- Speeds up to 60** bags per minute  
**- More than 16 variants** of doypack bags

## 3 TYPES OF BAGS

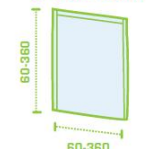

### DOYPACK

### "G" type

### 3 side seal

All dimensions in mm

## FORMED, FILLED AND SEALED TO PERFECTION

- ▣ **Flawless DOYPACK bags and seals**
- ▣ **Over 15 years of experiences and in-house research & development**
- ▣ **Up to 16 variations of DOYPACK**

## Designed for DOYPACK

### MACHINE FEATURES

- Automatic film centering
- Friction/Vacuum pulling belts
- Registration mark sensor
- Mechanic/Pneumatic splicing table
- Stainless-steel machine frame
- Self-diagnostics and troubleshooting

### HUMAN-MACHINE INTERFACE

- 10"/15" full color touch screen
- Industrial PC
- Intuitive machine setup and on-screen guide
- User presets for machine setup

### DATASERVICE

- Online service support
- Online data management
- OPC dataservice available
